Distribution of consumption of goods and services, 2006, and 2016 by subsectors in Afls.

Distribution of consumption of goods and services, 2006, and 2016 by subsectors in % (Total = Afls.4,293)

Percentage change in the average household consumption of goods and services, 2006, and 2016 by subsector

■ 2006 ■ 2016

Since the last Income & Expenditure Survey (I&ES) held in 2006, a lot has changed concerning income and expenditures of households. New products entered the market, other products are out of the market, and consumption patterns changed. The 2016 edition of the I&ES includes these changes and covers expenditures from up to a year prior to the survey. It provides information on household income and household expenditures, it assesses the living conditions of households, and it also observes the consumption patterns of households. In addition, it plays an important role in rebasing the consumer price index (CPI), in revising the price lists used for collecting information on changes in prices, and in compiling the “Use Table” in the process of building the System of National Accounts of Aruba.

The data gathered provides useful information to calculate indicators on the socioeconomic situation of households which serve, amongst others, to inform policy makers in the formulation of social and economic policies. It is broadly used by government departments, private organizations, researchers and the community as a whole.

A special thanks goes to all the households that participated in the survey for their valuable contribution, and to all the interviewers that contributed to the successful completion of this I&ES 2016.

## GENERAL CHARACTERISTICS

In addition to income and expenditure data, the I&ES collects information on the characteristics of households and those of their members, such as household composition, household size, activity status, level of education and age.

A total of 918 households, consisting of 2,403 persons, were interviewed, resulting in an estimated average household size of 2.6 persons per household. The most common households were two person households consisting of 2 adults (26.9%), one-person households consisting of 1 adult (26.3%), three person households consisting of 3 adults (7.8%) and three person households consisting of 2 adults and 1 child (7.8%). The average age of adults varied by type of household, where adults in one-person households and adults in households without children had a relatively higher average age when compared to adults in households with children (the average age of adults was 62 years in one-person households and 40 years in households consisting of 2 adults and 2 children). The average age of children in households with children was between 8 and 9 years.

Noteworthy is the changing age composition of the population which is reflected in the both the 2006 and 2016 I&ES. In 2016, children accounted for 18.4 percent of Aruba’s total population, compared to 22.2 percent in 2006. This same trend is seen during the 2016 I&ES, where children accounted for 19.0 percent of the sampled population compared to 21.3 percent during the 2006 I&ES. On the other hand, in 2006, 17.4 percent of the interviewed population was 60 years or older and in 2016, 25.3 percent of the interviewed population was 60 years or older, while their share in Aruba’s population was respectively 12.8 percent in 2006 and 18.8 percent in 2016.

About half (49.7%) of all the households interviewed during the 2016 I&ES consisted entirely of persons born in Aruba, 44.1 percent had members of mixed origin, and 6.2 percent consisted entirely of foreign-born persons.

Of all households, 63.6 percent owned their living quarter, 29.3 percent rented their living quarter, and 7.1 percent lived for free (paid no charge for the use of the living quarter). More than three quarters of all households (78.2%) lived in a house. It was more likely for owners of living quarters to live in a house than renters. Ninety three percent of owners lived in a house compared to 48.3% of renters. More than half of households that rented reported paying the so-called ‘basic rent’ (58%) – with no additional services included. Of the owners, 35.9 percent reported having a mortgage.

## HOUSEHOLD INCOME

The average gross monthly household income from all sources was Afl.4,551 in 2016 and the median gross monthly household income equaled Afl.3,558. When compared to the 2006 I&ES, both the average and the median gross monthly household income increased (by respectively 7.7 percent and 1.7 percent).

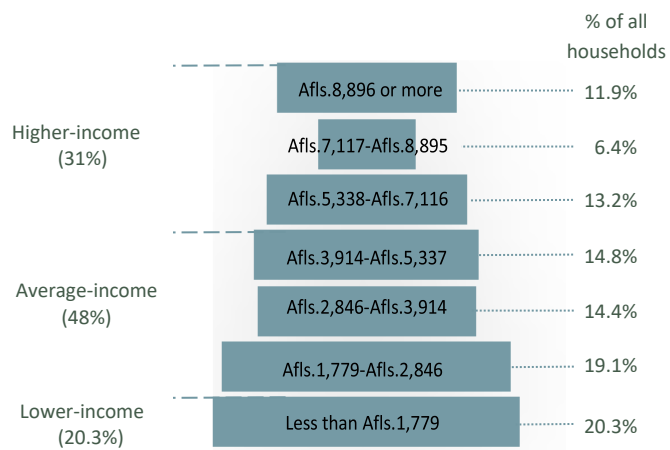

**Table 1. The average and median gross monthly household income, the average number of contributors to the household income, and the average household size, 2006 and 2016**

	2006	2016	% change 2006-2016
Number of households	784	918	
Average household size	2.8	2.6	
Average number of contributors to household income	1.7	1.6	
Average household income	4,226	4,551	7.7
Median household income	3,500	3,558	1.7

*Household income distribution according to the Organisation for Economic Co-operation and Development (OECD)*

In order to compare the perceived inequality in a society with the actual distribution of income, the OECD divides the population into seven income classes<sup>1</sup>. The income diagram in figure 1 uses similar subdivisions except for the fact that the gross household income was used instead of the net equivalised disposable (i.e. net) income used by the OECD.

**Figure 1. Monthly gross household income distribution according to data from the 2016 I&ES by OECD classification**

The 'Lower-income' class covers all households with a gross monthly household income below 50 percent of the median income of all households (Afls.3,558). In total, 20.3 percent of all households were categorized as 'Lower-income class' households, with an average monthly household income of less than Afls.1,779. The 'Average-income' class covers all households with a gross monthly household income between 50 and 150 percent of the median income of all households and spans three bars: from 50 to 80 percent of the median, from 80 to 110 percent of the median and from 110 to 150 percent of the median. In total, 48 percent of all households were 'Average-income class' households with an average monthly income between Afls.1,779 and Afls.5,337. The 'Higher-income' class covers households with a gross monthly household income above 150 percent of the median income of all households (that is an average monthly household income of Afls.8,896 or higher), and covers the three highest bars of the diagram: from 150 to 200 percent, from 200 to 250 percent and above 250 percent of the median income.

Figure 1 shows that there was a relatively large number of households near the top (31%). However, the majority of households were at the bottom, in either the Lower-income group or the lowest bracket of the Average-income group (39.4%). Figure 1 also shows the unequal income distribution in the higher-income group, as it is more likely for households to be either on the bottom of the High-income class, closer to

the Average-income group or at the very top, with only a few households in between.

*The Gini coefficient*

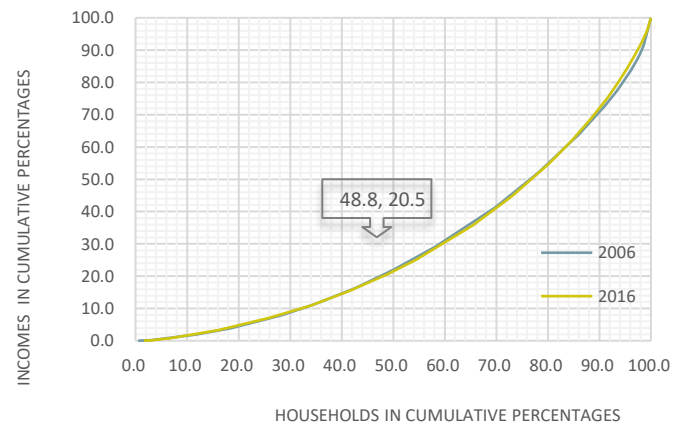

The Gini coefficient further illustrates this inequality. A Gini coefficient of '0' would be perfect equality (all households would have the same income) and a Gini coefficient of '1' would be perfect inequality (1 household has all the income).

The Gini coefficient in 2016 was calculated at 0.42, which is about the same as in 2006 (0.40), indicating also the relatively unequal distribution of income among households.

*The Lorenz curve*

Another measure of inequality is the Lorenz curve. The Lorenz curve in figure 2 also shows the relatively high degree of income inequality, with the lowest half of households (48.8%) accounting for only 20.5% of the total accumulated household income.

**Figure 2. Lorenz curve gross monthly household income I&ES 2006, and 2016**

*Household income divided in decile groups*

Households can also be divided into ten equally sized groups, called decile groups, according to their household income. The first percentile group in table 2 represents 10 percent of the households with the lowest income: an income lower or equal to the first cut-off value, which is Afls.990 in 2006 and Afls.1,100 in 2016. The tenth percentile group represents the 10 percent of households with the highest income, an income higher than the ninth cut-off value, that is higher than Afls.7,802 in 2006, and Afls.9,415 in 2016.

<sup>1</sup> [www.oecd.org/statistics/Compare-your-income-methodology.pdf](http://www.oecd.org/statistics/Compare-your-income-methodology.pdf)

**Table 2. Gross monthly household income distribution in percentiles, 2006, and 2016**

	2006	2016	% change 2006-2016	Purchasing Power 2016 (in constant prices of 2006)
10 <sup>th</sup> percentile	990	1,100	11.1	-8.5
20 <sup>th</sup> percentile	1,552	1,750	12.8	-7.2
30 <sup>th</sup> percentile	2,139	2,200	2.8	-15.3
40 <sup>th</sup> percentile	2,816	2,883	2.4	-15.7
50 <sup>th</sup> percentile	3,500	3,558	1.7	-16.3
60 <sup>th</sup> percentile	4,090	4,432	8.4	-10.8
70 <sup>th</sup> percentile	5,000	5,543	10.9	-8.7
80 <sup>th</sup> percentile	6,250	6,988	11.8	-8.0
90 <sup>th</sup> percentile	7,802	9,415	20.7	-0.7

At first, the results of the 2016 I&ES showed that there was relative improvement in incomes at most income levels in 2016. The middle group showed the least improvement during this 10 years' time.

However, correcting the 2016 income for inflation (relative to 2006) lead to different results. Without correction, it seemed that the gross household income of the 10<sup>th</sup> lowest percentile group improved with 11.1 percent during the 10-year period, however, when correcting their 2016 income to that at 2006 levels, it resulted in a loss of purchasing power (a decrease of 8.5%) between 2006 and 2016. The inflation during the period 2006-2016 was 21 percent. The correction showed a decline in purchasing power in all percentile groups, except for the 90<sup>th</sup> percentile, which remained almost the same, when compared to the other groups (See Figure 3).

**Figure 3. Consumer purchasing power development 2006, and 2016 (in constant prices of 2006) per percentile group**

The largest group represented in the 40 lowest income group was composed of one-person households. More than 75 percent of one-person households had a gross household income in the lower 40 percentiles. This should come as no surprise as 57.3 percent of one-person households consisted of a person aged 60 years or older, of which more than two thirds relied on their pension as their sole source of income.

## HOUSEHOLD EXPENDITURES

The expenditures are classified by categories according to the International Classification of Individual Consumption according to Purpose (COICOP). The average household expenditures were Afl.4,293 per month, a 2.2 percent increase relative to 2006 (Table 3). The average household spending increased in eight of the 12 major COICOP-sectors (table 3) and decreased in 4, when compared to the 2006 I&ES.

**Table 3. Change in the monthly average expenditures per household 2006, and 2016 (12 major COICOP categories)**

COICOPAU A	2006	2016	Change	
			Afls.	%
01 Food and non-alcoholic beverages	353	374	21	6.1
02 Alcoholic beverages and tobacco	28	27	-1	-3.8
03 Clothing and footwear	198	95	-103	-51.9
04 Housing	1,664	1,613	-51	-3.0
05 Household operation	240	320	80	33.3
06 Health	74	77	3	3.7
07 Transport	627	518	-109	-17.4
08 Communications	223	316	93	41.5
09 Recreation and culture	319	346	27	8.6
10 Education	26	34	8	30.8
11 Restaurants and hotels	119	152	33	27.9
12 Miscellaneous goods and services	331	421	90	27.1
<b>Total</b>	<b>4,202</b>	<b>4,293</b>	<b>91</b>	<b>2.2</b>

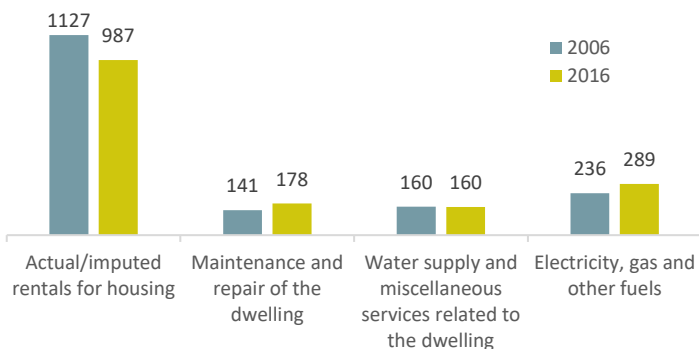

Table 4 shows the impact of these changes, where the expenditures per major category is presented as a percentage of the total average monthly expenditures.

**Table 4. Distribution of the monthly average expenditures per household 2006, and 2016 (12 major COICOP categories)**

COICOPAU A	2006	2016	% distribution		Ranking	
			2006	2016	2006	2016
01 Food and non-alcoholic beverages	353	374	8.4	8.7	3	4
02 Alcoholic beverages and tobacco	28	27	0.7	0.6	11	12
03 Clothing and footwear	198	95	4.7	2.2	8	9
04 Housing	1,664	1,613	39.6	37.6	1	1
05 Household operation	240	320	5.7	7.4	6	6
06 Health	74	77	1.8	1.8	10	10
07 Transport	627	518	14.9	12.1	2	2
08 Communications	223	316	5.3	7.3	7	7
09 Recreation and culture	319	346	7.6	8.1	5	5
10 Education	26	34	0.6	0.8	12	11
11 Restaurants and hotels	119	152	2.8	3.5	9	8
12 Miscellaneous goods and services	331	421	7.9	9.8	4	3
<b>Total</b>	<b>4,202</b>	<b>4,293</b>	<b>100.0</b>	<b>100.0</b>		

In 2016, the largest household expense was 'Housing', accounting for 37.6% of a household's monthly expenditures. Within the 'Housing' sector, expenditures in the subsector 'Maintenance and repair of the dwelling' showed an increase of 26.2 percent and expenditures on electricity showed an increase of 22.6 percent (See Figure 4).

**Figure 4. Expenditures in COICOP subsectors for 'Housing' in Afls., 2006, and 2016**

The next largest expenditure category in 2016 was 'Transport', amounting to 12.1 percent of the monthly average household expenditures. The expenditures in the 'Transport' sector decreased with 17.4 percent when compared to 2006. The decrease in the 'Transport' sector was caused by a decrease in the subsector 'Transport services', which includes expenditures made for the use of local busses and local car lease.

Interesting to note in the 'Transport' sector is the decrease in the subsector 'Purchase of new motor vehicles'. Within this subsector, 'Purchase of new motor vehicles at local car dealers' almost halved between 2006 and 2016 (Afls.121 in 2016, compared to Afls.234 in 2006). In contrast, the results showed a considerable increase in the subsector 'Purchase of second-hand motor vehicles', specifically international purchases. The subsector 'Purchase of second-hand motor vehicles (international purchase)' increased almost six-fold when compared to 2006.

**Figure 5. Expenditures in COICOP subsector for 'Transport' in Afls., 2006, and 2016**

The latter coincides with the number of car imports by non-car dealers depicted in figure 6. The number of cars imported by non-car dealers increased from 94 units in 2006 to 1,129 units in 2016.

**Figure 6. Absolute number of car imports by type of importer, 2006-2016**

Source: Foreign Trade Statistics

Expenditures in the 'Communications' sector showed the largest increase in 2016 relative to 2006 (41.5%), even though they were on the 6<sup>th</sup> place where the largest expenses of households were concerned. Specifically, expenditures on the subsectors 'Purchase of modems', 'Accessories', 'Post-paid cellular phones' and 'Fixed rate and conversation costs of post-paid cellular phones' showed large increases relative to 2006.

Interesting are the expenditures in the 'Clothing and Footwear' sector, that more than halved. This may be partially explained by the fact that, in both the 2006 and 2016 I&ES, persons 60 years and older were somewhat over-represented in the sample (see the methodology section in the final chapter). Expenditures on "Clothing and Footwear" decreased in all subsectors of clothing, except for "school uniforms" and "sports clothing" (particularly men's), which showed relatively small increases.

However, according to Bloomberg<sup>2</sup>, clothing is being displaced by technology, eating out, and activities and travel. Societal changes in the way people dress, such as "casual Fridays", are becoming the common dress code, with little differentiation between what people wear to work and what they wear on the weekends, which also contributes to the need to buy less clothing. Bloomberg also mentions the pressure fast-fashion companies and off-price retailers are putting on prices, mimicking runway fashions for much less, and the influence of social media celebrities taking over retailers and traditional fashion trendsetters. Aruba is no exception as the results of the 2016 I&ES showed that expenditures in the 'Communications' sector, the 'Food and beverage consumption outside the home' subsector and the "Travel" subsector increased respectively with 41.5 percent, 27.5 percent and 83.7 percent, when compared to 2016.

<sup>2</sup> [www.bloomberg.com](http://www.bloomberg.com) The Death of Clothing, February 5, 2018

## HOUSEHOLD EXPENDITURES VS INCOME

The median gross monthly household income is exactly in the middle of the range of incomes. Meaning that half of households are considered to be in the Low-income class if their income is equal or below the median (Afls.3,558). The other half is in the High-income class as their income is higher than the median.

Households in the High-income class spend, on average, 2 times more than households in the Low-income class. However, regardless of household income, “Housing” was by far the largest expenditure, both at the lower end of the income distribution as at the higher end. However, the pressure was highest at the lower end as housing represented 44.5 percent of their total average monthly household expenditures, compared to 33.9 percent for households in the High-income class.

**Table 5. Monthly average expenditures per household 2016 by income group (12 major COICOP categories)**

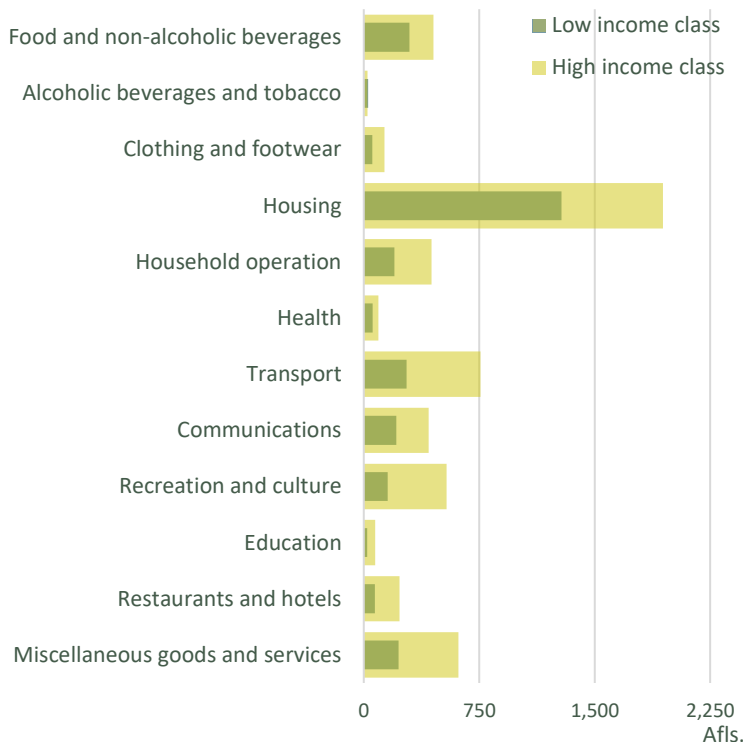

COICOPAUA	in Afls.		% distribution	
	Low income class	High income class	Low income class	High income class
01 Food and non-alcoholic beverages	296	453	10.3	7.9
02 Alcoholic beverages and tobacco	29	25	1.0	0.4
03 Clothing and footwear	55	135	1.9	2.4
04 Housing	1,284	1,943	44.5	33.9
05 Household operation	200	440	6.9	7.7
06 Health	58	96	2.0	1.7
07 Transport	277	758	9.6	13.2
08 Communications	210	421	7.3	7.3
09 Recreation and culture	155	538	5.4	9.4
10 Education	22	74	0.8	1.3
11 Restaurants and hotels	72	233	2.5	4.1
12 Miscellaneous goods and services	226	616	7.8	10.7
<b>Total</b>	<b>2,883</b>	<b>5,732</b>	<b>100.0</b>	<b>100.0</b>

The focus of households in the Low-income class, apart from ‘Housing’ was on ‘Food and non-alcoholic beverages’. More than 50 percent of all expenditures of Low-income class households was on ‘Housing’ and ‘Food and non-alcoholic beverages’, while for High-income class households the focus was mainly on ‘Housing’ (33.9%), ‘Transport’ (13.2%) and ‘Miscellaneous goods and services’ (10.7%).

The largest discrepancy in expenditures between the Low-income class households and the High-income class households was in the “Recreation and culture’ sector. Households in the High-income class spend on average three and a half times more than households in the Low-income class on ‘Recreation and culture’.

It is interesting that Low-income class households and High-income class households have similar proportion of expenditures on the ‘Communications’ sector, accounting for 7.3 percent of both their average gross monthly household income. In cash terms, this represented Afls.201 per month for low-income class households while for High-income class households this represented Afls.421 per month.

**Figure 7. Average monthly household expenditures by income class in Afls. (12 major COICOP categories)**

## CONCEPTS AND DEFINITIONS

### COICOPAUA

The COICOPAUA is based on the international standard Classification of Individual Consumption According to Purpose (COICOP) and has been adapted to suit Aruban conditions (COICOPAUA) since the 2006 I&ES. The COICOP is a classification developed by the United Nations Statistics Division to classify and analyze individual consumption expenditures incurred by households, non-profit institutions serving households and general government according to their purpose.

Some adaptations in the COICOPAUA include:

- Food and beverage consumption outside the home
- Other medical treatments (incl. treatments by practitioner(s) of alternative medicine, corrective eye surgery, botox treatment, breast augmentation/reduction, facelift, tummy tuck, etc.)
- Other health related incurred costs (expenditures made for transport, accommodation and meals and beverages while abroad for medical treatment)
- Holidays (abroad and local)
- Party and special occasions' products and services (in particular birthday parties, celebration of baptism, holy communion, weddings, Christmas and carnival)
- Exclusion of money transfers in the sector "Miscellaneous goods and services".

Major classification categories:

1. Food and Non-alcoholic Beverages
2. Alcoholic Beverages, Tobacco and Narcotics
3. Clothing and Footwear
4. Housing (incl. water and electricity)
5. Household operation
6. Health
7. Transport
8. Communications
9. Recreation and Culture
10. Education
11. Restaurants and Hotels
12. Miscellaneous Goods and Services

### CONSUMPTION

The activity of consumption consists of the non-productive use of goods and services for the satisfaction of individual or collective human needs or wants. In the I&ES consumption is recorded on acquisition basis. The acquisitions variant of the expenditure approach defines expenditures as the value of the goods and services which households purchase at the time those goods or services are actually acquired.

Consumption expenditure of households covers:

- a. Purchases of goods and services
- b. Goods and services received as income in kind
- c. Produce on own account which includes the imputed values of the housing services from owner-occupied dwellings. (The housing services produced are deemed to be equal in value to the rentals that would be paid on the market for accommodation of the same size, quality and type).

The following outlays are excluded from the consumption expenditure:

- a. Direct taxes
- b. Pension fund contributions and social security
- c. Interests paid
- d. Current transfers received
- e. Investments, including improvements and expansions of own residence
- f. Extended loans
- g. General health insurance (AZV)

### HOUSEHOLD

A household is defined as all individuals occupying the same living quarter who have made common arrangements for their subsistence, including arrangements for food and other essentials. These individuals share a common room in the living quarter and/or share their meals. With respect to live-in domestic workers, they are considered as separate household in the I&ES, independent on whether or not they have their own quarters, separate and almost independent, after their daily work.

The following household types are excluded from the I&ES:

- a. Collective households: such as elderly homes, hospital, prison, etc.
- b. Households consisting of more than 13 persons
- c. Households consisting of persons not suitable for an interview: alcoholics, drug addicts, mentally

unstable persons, etc. as it is difficult to collect reliable information from these persons

- d. Tourists who stay less than 1 year on the island
- e. Households residing less than 6 months on the island

### ***HOUSEHOLD TYPE***

The definition of households is in accordance with the definition used in the calculation of the subsistence level. Factors taken into account are the size of the household and the age of its members (whether they are adults or children). The age limit for a child is set at 15 years and adults are all persons 16 years and over.

Household types may be a:

- a. one-person household, 1 adult
- b. 2 person household, 2 adults
- c. 3 person household, 2 adults, 1 child
- d. 4 person household, 2 adults, 2 children
- e. 3 person household, 3 adults
- f. 4 person household, 3 adults, 1 child
- g. 4 person household, 4 adults

### ***INCOME***

The Income and Expenditure Survey only covers the gross income. Gross income is the total income before deductions of own contributions and additions on employer's social contributions. We distinguish the following three forms of income:

- a. Wages, salaries and employer's contribution to social security and gross entrepreneurial income of own enterprise
- b. Income from odd jobs (only if the odd job is on a regular basis)
- c. Income from property rental (houses, apartments), excl. costs
- d. Income from interests (savings account, time deposits), investments and stocks (capital)
- e. Current transfer received and other receipts such as widow's pension, orphan's pension, old age pension, welfare, alimony and child allowance

The personal income is calculated from the following sources:

- a. For the employed population it comprises income from salary, income from a second job and/or tips and income from other sources

- b. For the not-employed population income is calculated from receipts from other sources

The total household income is the sum of a + b of all members of the household.

It is important to mention that there are certain receipts, which are not included in the income:

- a. Retainer income (VUT, golden handshake, cessantia, lumpsum)
- b. Any type of insurance benefits (incl. life-, car- and fire insurance)
- c. Tax/AOV/AZV return payments
- d. Cash gifts (as financial aid) and non-cash gifts from persons not belonging to the household)
- e. Lottery prizes
- f. Inheritance
- g. Sale of property
- h. Loans received
- i. Loan payments received
- j. Compensation from suffering

### ***IMPUTED RENTALS FOR HOUSING***

Imputed rentals is the sum of rents imputed to households that own and occupy their living quarter. It is equivalent to rentals - that is, the rent that a tenant would pay for an identical accommodation let unfurnished, taking into consideration factors such as the type of dwelling, its size in m<sup>2</sup>, the number of rooms, the number of toilets and bathrooms, its location and the quality of the living quarter.

## METHODOLOGY

The fieldwork of the 2016 Household Income & Expenditure Survey (I&ES) was conducted from May to July 2016 by a group of 23 interviewers. Expenditures were collected according to the Standard Classification of Individual Consumption by Purpose of Aruba (COICOPAUA), which is based on the European Standard Classification of Individual Consumption by Purpose, or COICOP

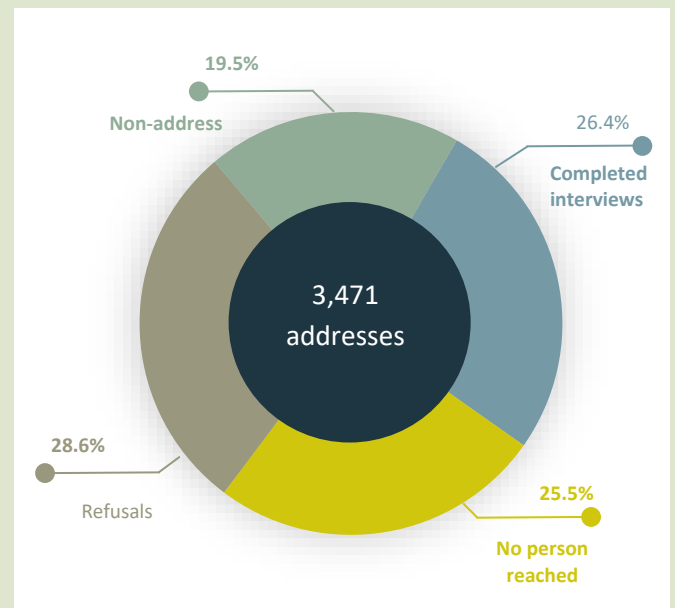

The I&ES 2016 was composed of two parts: 1. A retrospective questionnaire which covered both one-time purchases and regular payments incurred a month to a year prior to the survey, and a daily expenditure book which included all daily purchases of all members of the household over a period of two weeks. The retrospective questionnaire also collected information on characteristics of the household (sex, age, country of birth, educational attainment and marital status) and characteristics of the residence. The interviews were conducted using digital questionnaires on tablets.

The 2016 I&ES had a duration of 10 weeks. In 5 consecutive two-week periods, interviewers monitored 10 households for the duration of two weeks. By the end of the survey, each interviewer would have interviewed 50 households. Of the 4,800 households that were assigned to the interviewers, 3,471 households were canvassed (80.5%). A total of 918 households were visited and 2,403 persons were interviewed.

Provided that each interviewer had to convince at least 10 households to participate in the I&ES before the start of each subsequent two-week period, the number of households who were categorized as 'never home' drastically increased when compared to other surveys. In 25.5 percent of all canvassed households, no person could be reached during the fieldwork and in total, 19.5 percent of the addresses were either uninhabited (4.1%), could not be found (3.7%), were reported as being a business location (1.3%), were houses belonging to or rented to tourists, were under construction or were not suitable for an interview ('other reason' 10.4%).

True non-response was considered to be households that refused to participate or started but did not finish the survey, which was equal to 993 households. The non-response rate in 2016 was 28.6 percent compared to the non-response rate of 23.7 percent in 2006.
